SUMMARY

Software Developer with 4+ years of experience building production web applications with React, Next.js, Angular, and TypeScript. Frontend-focused, now extending into full-stack work with C# and .NET.

EXPERIENCE

Software Developer

2022 - current

Moonlay Technologies

- Contributed to 8+ client projects, delivering 20+ production web applications with React, Angular, and TypeScript as the primary frontend developer.
- Owned frontend code review across the team's repositories.
- Designed and built a shared React boilerplate (Vite, TanStack Router, Shadcn UI, Zustand, custom DataTable) to resolve recurring style and structure inconsistency across projects — established as the team's source of truth, so component updates are made once and propagate to all consuming projects.
- Resolved persistent, user-impacting bugs in a core spreadsheet-like dynamic form feature by refactoring per-row logic into centralized parent-level processing; the fix has been in production for nearly 2 years with zero bug reports, only feature requests since.
- Expanded into full-stack delivery, contributing backend features using C# and .NET.
- Mentored and onboarded 3 intern batches (~4 interns each) to date, guiding them through frontend fundamentals, project builds, and code reviews.

SKILLS

- Frontend:** React, Next.js, Angular, TypeScript, TanStack Query/Router/Table, Zustand, Shadcn UI, Tailwind CSS
- Backend:** C#, .NET, SQL Server, PostgreSQL
- AI-Assisted Development:** Claude, GitHub Copilot
- AI/ML:** LangChain, FAISS, RAG architecture, LLM integration (HuggingFace, Gemini)

EDUCATION

Institut Teknologi Harapan Bangsa

Bachelor of Information Systems
concentration in Data Science
2026

LANGUAGE

- Indonesia
- English
